Hamdani Nur Arifin

AI / Automation Engineer · 10+ years telecom network operations

Jakarta, Indonesia (UTC+7) · Open to remote · dani@kelolain.biz.id · tanyahamdani-ui.github.io · linkedin.com/in/hamdani-nur-arifin-b8b827174 · github.com/tanyahamdani-ui

SUMMARY

Network operations engineer with 10+ years keeping a production telecom network running, who builds and runs LLM-powered products and automation systems for his own businesses. Comfortable owning a system end to end: database, server functions, OAuth integrations, AI features, deployment and monitoring. Treats automation as something that must be verified and fail loudly.

PROJECTS

Kelola.in — Founder & sole engineer

2026 – present · kelolain.biz.id

SaaS for small Indonesian online sellers: content planning, AI-generated content, sales and profit tracking.

- Built a vanilla JavaScript PWA (56 modules, ~18k lines, ~240 commits) on Supabase: Postgres with Row Level Security, Google Auth, Storage, and 21 Edge Functions in Deno/TypeScript; hosted on Cloudflare Workers with auto-deploy.
- AI "Studio": generates batches of posts (title, caption, hashtags), renders on-brand images in the browser with Canvas, swipe-to-approve into a content calendar.
- Server-side LLM proxy (Gemini, with a Claude path) with per-user/per-IP quotas, model fallback and output validation with retries, so users need no API keys.
- OAuth integrations for Instagram (Facebook Login for Business), Threads and TikTok; tokens encrypted at rest (AES-GCM) and never exposed to the browser; comment inbox with AI-suggested replies; Midtrans payments.
- Growth funnel: onboarding that generates a visitor's first 3 posts before signup, plus free SEO tools feeding it.

SCNTR — Marketing automation for my perfume brand

2026 – present

- ~150 Node.js scripts (~21.6k lines) and 46 scheduled jobs (macOS launchd) running daily marketing operations.
- Scheduled TikTok/Instagram uploads via headless Chrome over the Chrome DevTools Protocol, with per-item restarts and post-upload verification.
- Daily giveaway pipeline (text-to-video, scheduling, random winner selection), stock/order monitoring, Telegram reports, and a watchdog job that reports failing jobs.
- Orchestrates several AI coding agents through a task queue with written guardrails and output review.

Lead intake workflow (n8n)

Portfolio demo

Webhook intake that normalizes and validates leads, assigns stable IDs, returns clear HTTP errors, and keeps credentials out of the workflow file.

EXPERIENCE

Network Operations (NOC) Engineer

2012 – present

Telecommunications company · Jakarta

- Monitored and troubleshot a production telecom network: alarm handling, fault isolation, and coordination with field teams until service restoration.
- Built small internal tools for routine checks: scripted reports for optical power levels and interface error counters, and an inventory tracker for optical modules.
- Tested configurations in network lab simulation before production changes.

EDUCATION

Diploma (D3), Informatics Engineering · Indonesia

SKILLS

Languages	JavaScript, TypeScript, SQL, shell
Backend & infra	Node.js, Deno, Supabase/Postgres (RLS), Cloudflare Workers, REST APIs, webhooks, launchd/cron
AI	LLM integration (Gemini, Claude), prompt design, structured output validation, AI agent orchestration
Automation	n8n, browser automation (Chrome DevTools Protocol), Telegram bots, OAuth (Meta Graph, Threads, TikTok)
Networking	Network operations, troubleshooting, incident handling, optical/interface monitoring
Languages spoken	Indonesian (native), English (working)
